# Awakening Minds in HSC

Encourage a culture where all students feel confident to contribute during lessons, where all learn from the participation of others and where students encourage and support each other to become enthusiastic and engaged learners.

Achieving Dreams in HSC

Inspire all students, regardless of background, to ask questions about the development and use of technology and the role of film and media in shaping our society. Students will be given the opportunity to understand the behaviour of individuals from a scientific perspective, whilst recognising the structure and divisions within a society and how they can impact on life chances. Through awakening minds, staff will inspire students to become global citizens and participate in societal debates that shapes their futures.

Serving Others in HSC

Ensure every student, regardless of starting point, becomes computer literate, enabling them to become independent learners, utilising technology to improve their life chances. Each student will develop the skills of reflection and empathy, understanding and tolerating the views of others. Students will also develop the skills of discussion, allowing them to utilise evidence to support their argument from Key Stage 4 to future employment.
