

Science Year 10 – Summer Term 2021

	<b>What?</b> <b>When?</b> <b>Why?</b>	<b>PHYSICS</b> <b>P6 Radioactivity</b>	<b>BIOLOGY</b> <b>B6 Plant structures &amp; Functions</b>	<b>PHYSICS</b> <b>P7&amp;8 Energy, Forces &amp; doing work</b>	<b>BIOLOGY</b> <b>B7 Animal Co-ordination &amp; control</b>
Lesson 1 Learning intentions	<p><b><u>Atomic models</u></b></p> <p>Describe an atom as a positively charged nucleus surrounded by negatively charged electrons, with the nuclear radius much smaller than that of the atom and with almost all of the mass in the nucleus.</p> <p>Recall the typical size (order of magnitude) of atoms and small molecules.</p> <p>Describe how and why the atomic model has changed over time including reference to the plum pudding model and Rutherford alpha particle scattering leading to the Bohr model</p>	<p><b><u>Photosynthesis</u></b></p> <p>Describe photosynthetic organisms as the main producers of food and therefore biomass.</p> <p>Describe photosynthesis in plants and algae as an endothermic reaction that uses light energy to react carbon dioxide and water to produce glucose and oxygen</p> <p>B6.9: Describe ... the structure and function of the stomata.</p>	<p><b><u>Work &amp; Power</u></b></p> <p>Identify the different ways that the energy of a system can be changed</p> <p>a) through work done by forces            b) in electrical equipment            c) in heating.</p> <p>Describe how to measure the work done by a force and understand that energy transferred (joule, J) is equal to work done (joule, J)</p> <p>Recall and use the equation:</p> <p>work done (joule, J) = force (newton, N) × distance moved in the direction of the force (metre, m)</p> $E = F \times d$ <p>Describe and calculate the changes in energy involved when</p>	<p><b><u>Hormones</u></b></p> <p>Describe where hormones are produced and how they are transported from endocrine glands to their target organs including the pituitary gland, thyroid gland, pancreas, adrenal glands, ovaries and testes.</p>	

			<p>a system is changed by work done by forces.</p> <p>Define power as the rate at which energy is transferred and use examples to explain this definition.</p> <p>Recall and use the equation:</p> <p>power (watt, W) = work done (joule, J) ÷ time taken (second, s)</p> $P = E/T$ <p>Recall that one watt is equal to one joule per second, J/s</p> <p>Explain ways of reducing unwanted energy transfer through lubrication</p>	
Lesson 2 Learning intentions	<p><b><u>Inside atoms</u></b></p> <p>Describe the structure of nuclei of isotopes using the terms atomic (proton) number and mass (nucleon) number and using symbols in the format</p> ${}_{6}^{12}\text{C}$ <p>Recall that the nucleus of each element has a characteristic positive charge, but that elements differ in mass by having different numbers of neutrons.</p>	<p><b><u>Factors affecting photosynthesis</u></b></p> <p>Explain the effect of temperature, light intensity and carbon dioxide concentration on the rate of photosynthesis.</p> <p><b>(H) Explain the interactions of temperature, light intensity and carbon dioxide concentration in limiting the rate of photosynthesis.</b></p> <p><b>(H) Explain how the rate of photosynthesis is directly proportional to light intensity and inversely proportional to the distance from a light source,</b></p>	<p><b><u>Objects affecting each other</u></b></p> <p>Describe, with examples, how objects can interact</p> <p>a) at a distance without contact, linking these to the gravitational, electrostatic and magnetic fields involved</p> <p>b) by contact, including normal contact force and friction</p> <p>c) producing pairs of forces which can be represented as vectors</p> <p>Explain the difference between vector and scalar quantities using examples</p>	<p><b><u>Hormonal control of metabolic rate (higher tier only)</u></b></p> <p><b>(H) Explain that adrenalin can be controlled by a negative feedback mechanism and is produced by the adrenal glands to prepare the body for fight or flight, including:</b></p> <p><b>a) increased heart rate</b></p> <p><b>b) increased blood pressure</b></p> <p><b>c) increased blood flow to the muscles</b></p> <p><b>d) raised blood sugar levels by</b></p>

	<p>Recall the relative masses and relative electric charges of protons, neutrons, electrons and positrons</p> <p>Recall that in an atom the number of protons equals the number of electrons and is therefore neutral</p>	<p><b>including the use of the inverse square law calculation.</b></p>	<p>Explain ways of reducing unwanted energy transfer through lubrication</p>	<p><b>stimulating the liver to change glycogen into glucose</b></p> <p><b>(H) Explain how thyroxine controls metabolic rate as an example of negative feedback, including:</b></p> <p><b>a) low levels of thyroxine stimulates production of TRH in hypothalamus</b></p> <p><b>b) this causes release of TSH from the pituitary gland</b></p> <p><b>c) TSH acts on the thyroid to produce thyroxine</b></p> <p><b>d) when thyroxine levels are normal thyroxine inhibits the release of TRH and the production of TSH</b></p>
<p>Lesson 3 Learning intentions</p>	<p><b><u>Electrons &amp; orbits</u></b></p> <p>Recall that in each atom its electrons orbit the nucleus at different set distances from the nucleus.</p> <p>Explain that electrons change orbit when there is absorption or emission of electromagnetic radiation.</p> <p>Explain how atoms may form positive ions by losing outer electrons .</p> <p>Describe how and why the atomic model has changed over time including reference to the plum pudding model and Rutherford</p>	<p><b><u>Core Practical</u></b></p> <p>Core practical: Investigate the effect of light intensity on the rate of photosynthesis</p>	<p><b><u>Vector diagrams</u></b></p> <p><b>(H) Use vector diagrams to illustrate resolution of forces, a net force, and equilibrium situations (scale drawings only)</b></p> <p><b>(H) Draw and use free body force diagrams</b></p> <p><b>(H) Explain examples of the forces acting on an isolated solid object or a system where several forces lead to a resultant force on an object and the special case of balanced forces when the resultant force is zero</b></p>	<p><b><u>The menstrual cycle</u></b></p> <p>Describe the stages of the menstrual cycle including the roles of the hormones oestrogen and progesterone, in the control of the menstrual cycle.</p> <p>Explain how hormonal contraception influences the menstrual cycle and prevents pregnancy.</p> <p>Evaluate hormonal and barrier methods of contraception.</p>

	alpha particle scattering leading to the Bohr model			
Lesson 4 Learning intentions	<p><b><u>Background radiation</u></b></p> <p>Explain what is meant by background radiation.</p> <p>Describe the origins of background radiation from Earth and space.</p> <p>Describe methods for measuring and detecting radioactivity limited to photographic film and a Geiger–Müller tube.</p>	<p><b><u>Absorbing eater &amp; mineral ions</u></b></p> <p>Explain how substances are transported into and out of cells, including by diffusion, osmosis and active transport.</p> <p>Explain how the structure of the root hair cells is adapted to absorb water and mineral ions</p>		<p><b><u>Hormonal Control of the menstrual cycle (higher tier only)</u></b></p> <p><b>(H) Explain the interactions of oestrogen, progesterone, FSH and LH in the control of the menstrual cycle, including the repair and maintenance of the uterus wall, ovulation and menstruation.</b></p> <p><b>(H) Explain the use of hormones in Assisted Reproductive Technology (ART) including IVF and clomifene therapy.</b></p>
Lesson 5 Learning intentions	<p><b><u>Types of radiation</u></b></p> <p>Recall the relative masses and relative electric charges of protons, neutrons, electrons and positrons.</p> <p>Recall that an alpha particle is equivalent to a helium nucleus, a beta particle is an electron emitted from the nucleus and a gamma ray is electromagnetic radiation.</p> <p>Compare alpha, beta and gamma radiations in terms of their abilities to penetrate and ionise.</p> <p>Recall that alpha, <math>\beta^-</math> (beta minus), <math>\beta^+</math> (positron), gamma rays and neutron radiation are emitted</p>	<p><b><u>Transpiration &amp; Translocation</u></b></p> <p>Explain how the structures of the xylem and phloem are adapted to their function in the plant, including:</p> <p>a) lignified dead cells in xylem transporting water and minerals through the plant</p> <p>b) living cells in phloem using energy to transport sucrose around the plant.</p> <p>Describe how water and mineral ions are transported through the plant by transpiration, including the structure and function of the stomata.</p>		<p><b><u>Control of blood glucose</u></b></p> <p>Explain the importance of maintaining a constant internal environment in response to internal and external change.</p> <p>Explain how the hormone insulin controls blood glucose concentration.</p> <p><b>(H) Explain how blood glucose concentration is regulated by glucagon.</b></p> <p>Explain the cause of type 1 diabetes and how it is controlled.</p>

	<p>from unstable nuclei in a random process.</p> <p>Recall that alpha, <math>\beta^-</math> (beta minus), <math>\beta^+</math> (positron) and gamma rays are ionising radiations.</p>	<p>Describe how sucrose is transported around the plant by translocation</p> <p>Explain the effect of environmental factors on the rate of water uptake by a plant, to include light intensity, air movement and temperature.</p> <p>Demonstrate an understanding of rate calculations for transpiration</p>		
Lesson 6 Learning intentions	<p><b><u>Radioactive decay</u></b></p> <p>Describe the process of <math>\beta^-</math> decay (a neutron becomes a proton plus an electron)</p> <p>Describe the process of <math>\beta^+</math> decay (a proton becomes a neutron plus a positron)</p> <p>Explain the effects on the atomic (proton) number and mass (nucleon) number of radioactive decays (<math>\alpha</math>, <math>\beta</math>, <math>\gamma</math> and neutron emission)</p> <p>Recall that nuclei that have undergone radioactive decay often undergo nuclear rearrangement with a loss of energy as gamma radiation.</p> <p>Use given data to balance nuclear equations in terms of mass and charge.</p>			<p><b><u>Type 2 diabetes</u></b></p> <p>Explain the cause of type 2 diabetes and how it is controlled.</p> <p>Evaluate the correlation between body mass and type 2 diabetes including BMI and waist:hip calculations using the BMI equation:</p> $\text{BMI} = \frac{\text{weight (kg)}}{(\text{height (m)})^2}$

<p>Lesson 7 Learning intentions</p>	<p><b><u>Half-Life</u></b></p> <p>Describe how the activity of a radioactive source decreases over a period of time.</p> <p>Recall that the unit of activity of a radioactive isotope is the Becquerel, Bq.</p> <p>Explain that the half-life of a radioactive isotope is the time taken for half the undecayed nuclei to decay or the activity of a source to decay by half.</p> <p>Explain that it cannot be predicted when a particular nucleus will decay but half-life enables the activity of a very large number of nuclei to be predicted during the decay process.</p> <p>Use the concept of half-life to carry out simple calculations on the decay of a radioactive isotope, including graphical representations</p>			
<p>Lesson 8 Learning intentions</p>	<p><b><u>Dangers of radioactivity</u></b></p> <p>Describe the dangers of ionising radiation in terms of tissue damage and possible mutations and relate this to the precautions needed.</p> <p>Explain the precautions taken to ensure the safety of people</p>			

	<p>exposed to radiation, including limiting the dose for patients and the risks to medical personnel.</p> <p>Describe the differences between contamination and irradiation effects and compare the hazards associated with these two.</p>
