

Awakening Minds in Psychology

The intent of the psychology curriculum is to foster passionate subject specialists with a deep understanding of key theories and topics. Through academic study and practical exploration, students will develop an appreciation for the scientific method and its application to the human mind and behaviour. Students will develop their analytical and critical thinking skills by evaluating theories and research, allowing them to articulate and defend their own arguments using evidence and data.

Achieving Dreams in Psychology

Our psychology curriculum is ambitious and prepares students for the challenges of the wider world. It sets them up for the future; personally, academically, and professionally. Regular links are made to possible careers and students are encouraged to have high expectations and aspirations, whilst being supported in developing their knowledge and skills so that their dreams become reality.

Serving Others in Psychology

Our curriculum fosters an awareness of a range of issues and debates within psychology and an appreciation of the work that still needs to be done around equality and diversity within the discipline. Students are also encouraged to actively apply their psychological knowledge to a range of real life contexts and consider how their understanding can improve the lived experiences of others.
